

The Monthly Roadmap Review

How Relay's AI planner turns a month of real execution data into next month's roadmap — in minutes, not meeting iterations.

Every month, an AI planner reads the team's real execution data out of Relay — tasks, worklogs, weekly digests, meeting notes, KPIs — and prepares next month's roadmap draft **before the planning meeting**: planned vs. delivered, the gaps and risks that matter, pointed questions for the team lead, and draft goals with the reasoning attached. The lead reviews it in a guided, click-through conversation — no documents, no wall of text.

The whole loop at one glance — it repeats automatically every month.

The flow, step by step

- 1 The 25th of the month — the draft writes itself.** The planner runs automatically, analyzes the month, and prepares the review. Every claim is backed by a real record — it cannot invent facts.
- 2 The lead opens Concierge** — the Roadmap review chip is waiting. Only that team's lead sees their team's review (enforced by the database, not by convention).
- 3 Recap card — the month at a glance.** A short headline, three counters (✓ delivered · ① partial · X missed) and the top-3 findings. Blocked and escalated items appear as counts, not lists — detail is one question away in chat.
- 4 One question at a time — click to answer.** Each question carries 2–4 concrete alternatives as buttons (*Carry to next month · Split into smaller deliverables · Drop it · Escalate as a structural dependency*) plus a free-text box. Progress shows as “Question 2 of 6.” Every answer saves instantly, and any question can be bounced into a normal chat discussion and back.
- 5 Wrap-up — two clicks to finalize.** The proposed goals are listed; finalizing is deliberately double-confirmed so nothing ships by accident. Goals can also be refined in chat first.
- 6 Goals go live in Relay** — for that team only. The draft locks, the chip disappears. Minutes, instead of the usual 2–3 meeting iterations.
- 7 The loop closes.** Every answer and edit becomes training signal — next month's draft starts from what the lead actually decided, so reviews get sharper every cycle.

The guarantees

- **Human decides, always** — the AI drafts and asks; only the lead's explicit clicks change anything.
- **Own team only** — a lead sees and finalizes only their team's roadmap; leadership sees all. Database-enforced.
- **Evidence or silence** — every finding cites the underlying records; a thin-data month is flagged, never guessed.
- **It runs itself** — the 25th of every month, nobody has to remember.

The lead's experience in detail

From the Roadmap review chip to finalized goals — recap card → question cards with one-click answers → two-click finalize → the learning loop.
